## Virtalus HyperCX Vault

Keep Your Business Up & Running.  
Each Moment.

A WORLD POWERED BY  
VIRTUALUS

## Overview

# HyperCX Vault

**HyperCX Vault** is a backup solution that keeps versioning of VM's images.

**HyperCX Vault** enables users to make full backups as well as manage those backups. In case of any unforeseeable or incalculable mistake by the client, a quick and easy restore facility is provided by Hypercx Vault with multiple versions to recover from. User has complete control over cycles of backups which can be configured.

**HyperCX** also offers disaster recovery which backs up user's crucial data on a storage server and makes those images available on Hypercx Marketplace.

**Hypercx Vault** utilizes Delta transfers which saves the cluster from unnecessary network overhead, once an entire image of a virtual instance is sent, redundant data is ignored, and changes are sent to the Vault Server.

## How it Works?

**HyperCX Vault** is a backup server which resides on the same geographical region but on a different physical server so in case of any failure user can revert back to their previous data and carry on with their important tasks with the VM.

## HyperCX Vault WHAT IT CAN BE USED FOR?

- If the Virtual Machine is destroyed by mistake, or data inside it is lost, they can recover from any point in time.
- Each backup is labeled with the date and time.
- Marketplace is used to store those backups. So recovering is as easy as downloading an appliance or os from the marketplace

*There can be alot of uses and  
it's pros are similar to any backup  
and restore service.*

## Always Stay Protected Business Continuity

If your organisation is handling sensitive data, a comprehensive business continuity plan for your systems, information and network is a basic necessity to safeguard you from both a physical threat or cyberattack. **HyperCX Vault** also helps protect your systems from an unforeseen calamity or other crisis with regional redundancies.

## Advantages of HyperCX Vault

- ✓ It adapts to a changing business environment
- ✓ It supports very large data sets
- ✓ It increases usability by business users because it is modeled after the business domain
- ✓ It allows for new data sources to be added without impacting the existing design

*Secure, Safe and Stable Cloud  
Infrastructure for your  
Enterprise*
